***Information Disclosure Statement***

The IDS filed on 30-MAY-2003 refers to US Pat. 5,242,876. However, US Pat. 5,242,876 has been withdrawn and is not available for consideration. All other references filed on 30-MAY-2003 have been considered.

***Allowable Subject Matter***

Claims 1-34 are allowed.

The following is an examiner's statement of reasons for allowance:

The prior art of record does teach or render obvious the claimed subject matter as a whole, for a process of making a biaxially oriented mini-random polypropylene film (see specification pg. 7 for applicant's definition of mini-random polypropylene) comprising the step of combining a non-particulate nucleating system, at a concentration of 25-300 ppm, with the polymer. It is noted that the Ward references teach such nucleating system (col. 4, li. 35-45) with polyolefins (see polymer of example 5), but at a much higher concentration. These references are silent with regard to use such low concentration of nucleating system with the mini-random polypropylene. Roberts teaches a nucleating system using similar materials (3:45-65) and concentrations as low as 200 ppm (see claim 3), but most of the dicarboxylic acids have high melting points (ie. above room temperature) and would appear to be in solid/particulate form, otherwise Roberts is silent with regard to particulate form of nucleating agent added.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
